

README_2.TXT

DISC TITLE: CHCS S/W Version 4.51 Documentation

EDITION: 1.0

VOLUME IDENTIFIER: Disc 2 of 2
Source Files

ORIGINATOR: SAIC/CHCS Data Management

PUBLICATION DATE: 30 September 1996

SECURITY CLASSIFICATION: UNCLASSIFIED

TIME PERIOD OF CONTENT: Valid until release of updated version from CHCS Data Management.

OPERATING ENVIRONMENT: Windows 3.1+

ACCESS/USE CONSTRAINTS: The material contained in this release is copyrighted by SAIC. License is granted under Contract DASW01-95-D0025 and the provisions of DFAR 52.227-7013 (May 1987) to the U.S. Government and third parties under its employ to reproduce this document, in whole or in part, for Government purposes only.

ABSTRACT: CHCS S/W Version 4.51 Documentation, CD Edition 1.0, Disc 2, contains SAIC/CHCS documentation in the original source application (WordPerfect, Microsoft Word, and FrameMaker).

POINT OF CONTACT: Debbi Maser, SAIC/CHCS Data Manager

MAINTENANCE AND
UPDATE FREQUENCY: Valid until release of updated version from CHCS Data Management.

DOCUMENT IDENTIFICATION/ABSTRACT:

CHCS S/W Version 4.51 Documentation, Edition 1.0, Disc 2, includes SAIC/CHCS documentation in the original source application (WordPerfect, Microsoft Word, and FrameMaker text and graphics files). To access the source files, the user must first determine the location of the desired file, start the appropriate application (e.g., WordPerfect, Microsoft Word, or FrameMaker), then open and edit the file. To determine the location of the file, please follow the filenaming convention key provided in this document.

Certain large FrameMaker files have been compressed using the PKZIP utility in order to fit all the source files onto one CD-ROM disc. The compressed files, indicated by the file extension ".zip", must be uncompressed using the PKUNZIP utility provided on CD-ROM Disc 2 before they can be accessed. To uncompress the files, from the Windows File Manager, double-click on a zipped file to launch PKUNZIP, or alternatively, double-click on /training/pkunzip.exe to bring up the PKUNZIP help/configuration screen.

Please note that in order to access the source files, you MUST have the source application, i.e., FrameMaker files cannot be edited in WordPerfect and WordPerfect files cannot be edited in FrameMaker. It is assumed that the user is sufficiently experienced in the use of the source application; no support for editing source files is provided.

FILENAMING CONVENTIONS:

CHCS S/W Version 4.51 Documentation, CD Edition 1.0, Disc 2 files are named in the "8.3" filenaming convention (8-character [or less] filename, followed by a 3-character [or less] extension) required by both the DOS operating system and ISO 9660 standard. Many documents are composed of a group of files, which, when printed, form one document. Each of the files in a document grouping must be opened individually.

Directories:

Because of the 8-character filenaming restrictions of Windows 3.x, uniformity in naming all files is necessary, regardless of the platform on which they will be accessed. The files included on this CD-ROM have been grouped into four categories:

- Training
- Implementation
- Users
- Security

Within those categories, all files comprising one document will reside in a directory named according to software version and TC number (e.g., \450570). Within the Training subdirectory, the documents have been further grouped by functionality (e.g., PAD, PAS, CLN, RAD, etc.) To find the TC number of a document when only the title is known, please refer to the online.pdf file found on Disc 1 of 2 for a list of provided documents. In the example below, d:\ represents the user's CD-ROM drive.

CHCS TC-4.5-0395:

```
d:\training\cln\450395\app.wp5
                        \fwd.wp5
                        \sl_4.wp5
                        \s5.fra
                        \s6.wp5
```

CHCS TC-4.5-0580:

```
d:\implem\app_a_g.wp5
                        \sec4_6.wp5
                        \toc_sl_3.wp5
```

File Extensions:

WordPerfect files are indicated by the extensions .wp or .wp5. All WordPerfect files included on this disc are WordPerfect 5.x (DOS and/or Windows) compatible.

Microsoft Word files are indicated by the extension .doc.

FrameMaker files commonly use the following extensions:

- .fra
- .frm
- .boo
- .bk

In addition, some FrameMaker files may have extensions such as .toc, .lof, and .lot.

File Names:

The 8-character file names are determined by the following naming convention:

cvr	=	cover sheet
frontmtr	=	front matter
ftm	=	front matter
fwd	=	foreword
m	=	module (as in m01 [module 1] or m12 [module 12])
s	=	section (underscore denotes "through" as in s1_5 [section 1 through 5])
app	=	appendix (appa_d = appendix a through appendix d)

These filenaming conventions have been followed as closely as possible; however, there may be some exceptions.

Examples:

The following are examples of filenames used to indicate parts of the document such as the table of contents, sections, appendixes, attachments, etc.

Examples:

0311.boo	=	book file (FrameMaker)
frontmtr.wp	=	front matter (WordPerfect)
ftm_appk.wp	=	front matter through Appendix K (WordPerfect)
fwd.doc	=	foreword (Microsoft Word)
m01s1a.fra	=	module 1, section 1 (the "a" indicates that module 1 section 1 has been split up and will be followed by m01s1b)
0311TOC.fra (autogenerated FrameMaker)	=	Table of Contents. The TOC has to have the 4-digit TC# because it is automatically generated and takes on the book title.
s4alop.fra	=	Section 4 (4a indicates that the section was broken into smaller, more manageable portions, "a" being the first of multiple parts of section 4), List of Paragraphs (FrameMaker); this file is automatically generated in FrameMaker
s6msarpt.wp	=	Section 6, MSA Sample Reports (WordPerfect) (substitute subsystem where MSA is used in filename [example: s6padrpt.wp5])
appa_b.fra	=	Appendix A through B (FrameMaker)
s1_6.wp	=	Section 1 through Section 6 (WordPerfect)
